"Global warming isn't real because I was cold today! Also great news: world hunger is over because I just ate."

- Stephen Colbert

The author offers his interesting thought. That statement surprised me. I wanted to hear some of the familiar words about global warming. The words ~~must~~^{would} be like: "It's the biggest and the most serious problem facing entire the world and humanity." But we have to consider the word "Global". This word means "equal for all without any exceptions". But will there be global warming when I see minus twenty degrees on thermometer almost every winter? All problems in the world are local and you don't need to mention it as a world wide menace. "World hunger is over because I just ate" - Stephen says. I think he's right because there will no ~~problem~~ world hunger while we have enough food on our planet to exist.

Conclusion -
